Digital TCLF 2025- EU Textile, Clothing, Leather & Footwear

Project description

The overall aim is to bring updated digital skills to the European textile, clothing, leather and footwear (TCLF) sectors by identifying the skills needed to embrace the digitalisation of industrial production, and increase the competitiveness of European companies.

The project was conceived by the European TCLF social partners to address the gap between the skills needed in these sectors and those provided by current training and education programmes. With the growing digitalisation of the economy and the lack of relevant skills to support this evolution in the TCLF sectors, digital skills development is one of the areas that has the highest impact on maintaining workers' employability and the modernisation and growth.

Project partners will analyse and define the emerging digital occupations previously anticipated by the TCLF Skills Council partners with a view to recommend the most useful and relevant skills for the digital development of the TCLF sectors in Europe.

Objectives

- To analyse the identified digital occupations and the skills required.
- To identify the market potential for these occupations that demonstrates the skills needs.
- To analyse the VET and other training courses available at EU Level and identify the gaps between existing programmes and those needed to provide the appropriate digital skills
- To promote the recommended training programmes among education providers, companies and other stakeholders.

Expected Outcomes

- A Roadmap for Digital Skills development in the TCLF sectors, with detailed exploitation strategies and training provisions
- Greater awareness of the need for digital skills in the TCLF sector
- The subsequent creation of the recommended training programmes that will provide the workforce with the necessary skills to enhance their employability.
