## Knowledge4Foot - Knowledge Platform for Transferring Research and Innovation in Footwear Manufacturing

### Description

In a context of European footwear manufacturing vulnerability to globalisation and international competition, the project Knowledge4Foot aims to focus on increasing the added value of European footwear by enhancing the research and development skills of workers. Specifically, the project aims to create a curriculum and platform for internships/project-based learning, which will allow interns to transfer their acquired skills and knowledge to the footwear sector.

### Objectives

- To foster excellence in tertiary level training and education in product design and development, engineering, and management by creating stronger links between education, research, and business
- To set up a new Knowledge Platform for transferring research and innovation in leather and footwear, focused on project-based training
- To design, test, and implement a common curriculum and e-learning content incorporating creative thinking, problem-solving and project-based learning following the principles of the European Qualification Framework (EQF)

### Expected Outcomes

- A study on project-based training in HE study programmes
- A common curriculum and course content for internships and project-based training & text book for a summer training course
- Guidelines for project-based training
- Knowledge4Foot Platform
- Promotional/communication materials, workshops, scientific papers, & final conference
